

World Biofuel Day

Faculty of Engineering and Technology celebrated the World Biofuel Day on 10th August 2023. On this day, an awareness seminar was conducted by the Petroleum Engineering Department. Prof. (Dr.) Amit Tuteja (Dean Engineering) and Er. Atul Goyal (Coordinator Petroleum Engineering) shared their views about the World Biofuel Day.

Er. Goyal told that we cannot assume our life without conventional energy resources, which are mainly used in transportation, electricity and heating purposes. Its usage is increasing with day-by-day increase with population and polluting our green earth in every way. These conventional resources will be exhausted soon. Then question arises about survival of living organisms? So, the solution is “Biofuel”. In the seminar, explanation had been given regarding raw materials, processing and finished biofuel, along with cost and merits/demerits of various processes.

Dr. Tuteja cleared that the objective of this day is to create awareness about the importance of non-fossil fuels as an alternative to conventional fossil fuels. So until the commercialization of biofuel, it is our duty to conserve these conventional resources.

In this seminar, all head of departments, faculty and students were present in this seminar.

At last but not the least, session was very effective and taken pledge to conserve our mother nature.
